

quick turns

With a dispatch rate of 99.9%, the HTF7000 is an uncommon engine. Surprisingly, it takes just 13 common tools to keep it that way.

Keeping Service Simple

These 13 tools (and about twenty minutes) are all you need to remove and replace line replaceable units (LRUs) on the HTF7000. That's it. At Honeywell, we understand the importance of simple maintenance. Simple maintenance means common tools, common fasteners, no need to remove one LRU to get to another, no shimming and no rigging. And the engine was designed to allow room for a service person's hands. Add our highly respected Maintenance Service Plan (MSP) for comprehensive coverage at minimal cost and the 7000 becomes even harder to beat. The HTF7000. Easy to trust, easy to operate and easy to maintain. That should make your task of choosing an engine pretty simple. *Engage Power.*
